LogjayVX audio logging

LogjayVX is a multipurpose application engineered to provide reliable audio logging and realtime indexing of massive amounts of media with fast access and retrieving features. LogjayVX can be configured as scheduled recorder or compliance of the latest 30 days of your broadcast (or more). You just set the desired number of days to keep track of, and forget it: LogjayVX will record uninterruptedly 24 hours a day, without any further requirements.

- 1** *Our clean and user-friendly design greatly speeds up your learning curve, minimizing support requests and operating mistakes.*
- 2** *Thanks to the plug-in structure, you may purchase only the specific features required., saving valuable money.*
- 3** *The LogjayVX multilanguage interface allows to quickly edit all the captions to your requirements or add a new language.*
- 4** *LogjayVX is "Windows10 ready", up to date to guarantee excellent performance on the newest hardware/software configurations.*

COMPLIANCE LOGGING FEATURES

LogjayVX can be quickly configured to run a zero-maintenance compliance logging server. LogjayVX will record uninterruptedly 24 hours a day and automatically remove the obsolete logged video to make space for the new one. You will always have the latest 90/180 days available again.

THE COMPANY

From 1997, Winjay is a leading developer of radio and TV broadcast automation products, ranging from radio/TV playout automation to commercial splitting, media asset management, audio / video logging systems. Offering good value for money, professional after-sale tech support, careful engineering and continuous innovation are key attributes to a successful product. Our customers know they can trust on us: for our company, this is the best form of advertising.

BUY WHAT YOU REQUIRE

LogjayVX is engineered on a multichannel building block structure, allowing from 1 up to 8 channels on the same recording server. Save money on initial purchase, add more channels later.

RECORDING SCHEDULER

The integrated recording scheduler offers scheduled ingest by day/time or external triggering. LogjayVX can even remote a A/V switcher for routing the required input. Capturing satellite feeds by data/time or external triggering becomes as easy as never seen before !

THE LOGJAYVX PLAYER

The included LogjayVX Player module allows instant playback of all logged audio from any workstation inside your LAN. Playback from up to 2 different channels can be synchronized and configured to different sound cards.

Thanks to state of the art engineering, both recording and playback will be completely seamless even when switching between consecutive audio segments, without any lost frame.

MULTIFORMAT ENGINE

The multiformat capture engine offers realtime encoding in the most popular formats such as mp3, ac3, aac, wav, ogg. All capture settings, such as bitrate, are completely user-definable according to required quality and available storage space.

IN/OUT STREAMING

LogjayVX fully supports capturing from streaming feeds, and can be configured for realtime streaming of captured media at the same time. LogjayVX can be easily interfaced with any 3rd party streaming platform thanks to the virtual device output.
